About me

Full-stack Developer with hands-on experience in Java, Spring Boot, React, Next.js, Node.js, and MySQL. Learns by working through real-world tasks — breaking down requirements, mapping data flow across layers, and identifying how each component fits into the overall system before writing code. Brings cross-cultural collaboration experience as a Bridge Engineer between Korean and Vietnamese teams, ensuring clear technical communication and aligned delivery.

Programming Skills

- **Programming Languages:** Java, C#, JavaScript, TypeScript, SQL, HTML, CSS
- **Frameworks/Libraries:** Spring Boot, JPA, React, Next.js, Express.js, ASP.NET MVC
- **Tools:** GitHub, Bitbucket, IntelliJ IDEA, VS Code, Postman, DBeaver
- **Build & DevOps:** Maven, Gradle, AWS, Bitbucket Bamboo
- **Environments:** Windows, Linux
- **Database:** MSSQL, MySQL, Oracle DB, PostgreSQL, MongoDB

Languages

- **Vietnamese:** Native
- **Korean – TOPIK (Level 5):** Fluent, able to explain complex IT concepts.
- **English – TOEIC (L + R: 860, S: 130):** Proficient in reading technical documents and listening comprehension; capable of daily conversation and technical discussion.

Education

Cheongju University – Undergraduate
Global Business Department

Feb 2019 – Feb 2023

Work Experiences

- **Brycen Korea Inc.** – Full-stack Developer Feb 2025 – Now
- Working as a full-stack developer, developing and maintaining web applications using Spring Boot, React, Thymeleaf, TypeScript, and related technologies
 - Experienced in deployment processes using AWS and Bitbucket Bamboo
 - Acted as a Bridge Engineer (BrSE), helping Korean and Vietnamese teams communicate and collaborate on shared projects
- **SK Materials Inc.** – Software Developer Jun 2023 – Dec 2024
- Developed and maintained internal approval web pages using HTML, CSS, JavaScript, and C#, supporting production team workflow processes
 - Built and integrated RESTful APIs to handle approval logic, and optimized MS-SQL stored procedures to improve backend query performance
 - Collaborated with end users to gather feedback and applied UX improvements to internal tools, increasing usability and adoption

Projects

- **SCP Upgrade & Data encryption/decryption** Feb 2026 – Present
- **Description:** Legacy modernization project to upgrade the application from Java 7 to Java 25 and migrate the framework to Spring Boot 4.0, addressing compatibility issues across deprecated APIs, JPMS module changes, and updated dependency behaviors
 - **Role:** Member (Backend Developer)
 - **Tech stack:** Spring Boot, Spring Security, Bitbucket Bamboo, Maven
 - **Responsibilities:**
 - Responsible for upgrading one project from Java 7 to Java 25 and Spring Boot 4.0, covering analysis, implementation, and testing
 - Wrote test cases and verified system behavior to ensure stability after migration
 - Prepared documentation and visualized the upgrade process through diagrams for team reference

➤ **Cafeteria Operations Management System – Brycen Korea Inc.**

June 2025 – Dec 2025

- **Description:** A centralized cafeteria management system consisting of a website and a web-view application for both managers and end users. Managers can oversee daily operations, including menu management, pre-order handling, and staff coordination. Users can browse daily menus, check food nutritional information, and stay updated on cafeteria events.
- **Role:** Member (Full-stack Developer)
- **Tech stacks:** Spring Boot, Spring Security, Microservices, Webflux, Thymeleaf, MySQL, KendoUI, Gradle
- **Responsibilities:**
 - Developed dynamic web pages using Spring Boot, JPA, Query Factory, React, KendoUI, and MySQL
 - Gained hands-on experience with cloud deployment using AWS and supporting CI/CD processes in both development and production environments.
 - Act as a bridge between Korean and Vietnamese teams, handling technical communication and task clarification

➤ **Healthcare Admin System – Brycen Korea Inc.**

April 2025 – June 2025

- **Description:** A web-based admin system was built to support a healthcare app for elderly users. It enables administrators to manage user accounts, upload health-related video content, and monitor app usage, including meals, medication, walking steps, and blood pressure records. The platform enhances system control, ensures data accuracy, and supports the overall functionality of the mobile healthcare service.
- **Role:** Member (Full-stack Developer)
- **Tech stacks:** Spring Boot, Spring Security, JWT, React, Material UI, MySQL, Gradle
- **Responsibilities:**
 - Supported the development of an admin dashboard for a healthcare app by implementing remaining pages such as FAQ, user instructions, daily video scheduling, and reward point settings
 - Developed backend APIs based on app requirements to support key functionalities

➤ **Research Operation Interface – Brycen Korea Inc.**

February 2025 – April 2025

- **Description:** A set of dashboards for managing research projects, schedules, and researcher assignments.
- **Role:** Member (Full-stack Developer)
- **Tech stacks:** React, Next.js, Redux, Redux-Saga, Node.js, Express.js, MySQL
- **Responsibilities:**
 - Analyzed database tables, existing codebase, and application flow to plan implementation strategy
 - Guided a teammate through development tasks and reviewed code for quality and consistency
 - Managed task progress and helped ensure the timely delivery of project milestones

➤ **SCM – Supply Chain Management System – SK Materials Inc.**

July 2024 – Dec 2024

- **Description:** Utilizing real-time data, this platform efficiently monitors stock, raw materials, and sales
- **Role:** Main (Software Developer)
- **Tech stack:** JavaScript, C#, MSSQL, HTML, CSS, Chart.js, jqPlot
- **Responsibilities:**
 - Read and processed extensive sales, prediction, and practical performance data.
 - Developed complex data structures to efficiently manage and display large datasets, including client, product, and stock information.
 - Visualized data in tables and charts, ensuring clarity and usability despite the volume and complexity of the information.
 - Developed Windows Service applications for calculating stock depletion points, ensuring timely alerts, and managing inventory.

➤ **ADMS – Analysis Request Management System – SK Materials Inc.**

March 2024 – July 2024

- **Description:** Developed to streamline the management of analysis requests, reducing reliance on traditional Excel-based workflows. The system enables managers to efficiently track and view, enhancing overall request handling and improving visibility throughout the process.
- **Role:** Main (Software Developer)

- **Tech stacks:** JavaScript, C#, MSSQL, HTML, CSS, Chart.js, jqPlot
- **Responsibilities:**
 - Visualized real-time production data using JavaScript libraries like Chart.js to enable monitoring of production trends and fault detection
 - Implemented real-time trend analysis, improving decision-making efficiency
 - Enhanced web UI and database integration, ensuring seamless data handling and better user performance.
 - Communicate and apply client feedback.

➤ **BEOS – Battery Evaluation and Operation System**

July 2023 – September 2023

- **Description:** System for users to submit approval forms, request battery testing, and manage battery provision workflows.
- **Role:** Main (Software Developer)
- **Tech stacks:** JavaScript, C#, MSSQL, HTML, CSS, jqPlot
- **Responsibilities:**
 - Developed responsive and interactive web pages to manage battery evaluation
 - Built Windows Service applications to automate email notifications based on predefined triggers, improving task automation and reliability
